

phx42 Self-check

The self-check in the phxApp is used to anticipate critical issues with your phx42.

We recommend performing a self-check to diagnose, anticipate, and correct any problems that may occur with the phx42. If your phx42 requires an RMA, the diagnosis provided by the self-check will help us return your phx42 as soon as possible.

How often should you run self-checks with phxApp?

Self-check with the phxApp regularly allows you to:

- Verify the health of the unit
- Transfer logs (limit length)
- Calibrate your filter detection
- Report an issue if any operating parameter is out of range
